Option Care Health, Inc.

California SB 253 – Scope 1 & Scope 2 Emissions Report
Reporting Year: Fiscal Year Ending December 31, 2025

Introduction

Option Care Health, Inc. ("the Company") has prepared this report in response to the California Climate Corporate Data Accountability Act (SB 253). This report reflects Scope 1 and Scope 2 greenhouse gas (GHG) emissions for the fiscal year ended December 31, 2025, using the Greenhouse Gas Protocol Corporate Accounting and Reporting Standard and applicable Scope 2 guidance.

Watershed Technology, Inc. ("Watershed"), an enterprise sustainability data and carbon accounting platform provider, supported the Company in calculating GHG emissions and compiling the Company's emissions inventory, including applying emissions factors and calculation methodologies to Company-provided data.

Organizational Information

- Company: Option Care Health, Inc.
- Headquarters: 3000 N. Lakeside Drive, Suite 300N, Bannockburn, IL 60015
- Industry (NAICS): 62 – Health Care and Social Assistance
- Boundary Approach: Operational Control

The Company operates a national network of healthcare facilities, with emissions primarily driven by facility energy usage. To the Company's knowledge, all controlled subsidiaries and entities are included with no exclusions of facilities or emissions sources.

Methodology

- Standard: GHG Protocol
- Scope 1 factors: EPA and IPCC (2025)
- Scope 2 factors: Watershed methodology
- Calculation approach: Hybrid (spend-based and activity-based)

No GHG emissions were excluded for materiality.

Scope 1 Emissions (Direct Emissions)

The Company used activity data and combustion and refrigerant emissions to calculate total Scope 1 emissions.

Total Scope 1 Emissions: 1,753 tCO2e

Source	**Emissions (tCO2e)**
Stationary Combustion	1,406
Mobile Combustion	196
Fugitive Emissions	151
Total	**1,753**

Scope 2 Emissions

The Company used electricity consumption and geography-based emissions factors to calculate total Scope 2 emissions.

Total Scope 2 Emissions: 9,993 tCO2e

The Company reports Scope 2 emissions on a location-based basis using emissions factors provided through the Watershed methodology. The Company did not utilize renewable energy instruments (e.g., renewable energy certificates or power purchase agreements) during the reporting period.

Source	**Emissions (tCO2e)**
Purchased Electricity	9,993

Combined Emissions Summary

Category	**Emissions (tCO2e)**
Scope 1	1,753
Scope 2	9,993
Total	**11,746**

Disclaimer

This report has been prepared by Option Care Health, Inc. in response to California's Climate Corporate Data Accountability Act, Health and Safety Code section 38532 (the "Act"), for the Company's fiscal year ended December 31, 2025. The greenhouse gas emissions information in this report is limited to Scope 1 and Scope 2 emissions. This report does not include Scope 3 emissions, which are subject to later reporting requirements under the Act and related CARB implementation guidance.

The emissions figures in this report were prepared using the Greenhouse Gas Protocol Corporate Accounting and Reporting Standard and applicable Scope 2 guidance, together with the organizational boundary, data sources, emissions factors, calculation methods, assumptions, and third-party tools identified in this report. The Company has applied an operational-control boundary and has used available activity data, spend-based information, and other estimation methods where more granular data was not able to be collected or obtained for this first reporting cycle.

Greenhouse gas accounting requires judgment and is subject to inherent measurement uncertainty, including uncertainty arising from source data availability, emissions-factor selection, estimation methods, global warming potential values, calculation tools, organizational boundary determinations, and evolving regulatory and market practices. The Scope 1 and Scope 2 emissions reported here therefore should be read as good faith estimates prepared on the basis of information available to the Company and its service providers at the time of preparation, rather than as empirical measurements of exact emissions.

The California Air Resources Board's ("CARB") 2026 reporting guidance reflects first-year enforcement discretion and states that CARB may accept first-cycle Scope 1 and Scope 2 submissions whether or not limited assurance has been obtained. This report has not been independently assured or verified.

The Company may update this report if additional information becomes available, if errors are identified, or if changes in emissions factors, calculation methodologies, assurance procedures, or CARB requirements affect the reported Scope 1 or Scope 2 emissions.
